

Boost Microsoft Purview DLP and CASB with Secuvy's Precise Data Classification

The Use Case

The sensitivity classification of a file can change over time as more sensitive information is added to it. Auditing and identifying the files whose sensitivity labels need to be elevated is not transparent and difficult to see in Purview. A solution is needed to enhance Purview's capabilities and improve data classification and policy enforcement.

Purview inventory is very comprehensive but it does not extend into other non MSFT environments where duplicates of the data may also exist.

How Secuvy Can Help

Secuvy's integration with Microsoft Purview addresses these gaps by enhancing data classification and policy accuracy.

Key Benefits of Secuvy's Purview Connector:

- **Update Labels at Scale:** Secuvy enables rapid updates for large data sets.
- **Reduce Policy Fatigue:** Contextual Classification ensures more relevant policy creation in Purview.
- **Detect Misclassified Labels:** Secuvy improves DLP policies by refining classification accuracy.
- **Classify Any Data Source:** Secuvy connects to multiple sources, providing Purview with a broader view of enterprise data.

This integration minimizes manual effort, boosts compliance, and enhances Microsoft Purview's overall performance.
