

Data Centric Security and Privacy

CONTEXTUAL AWARENESS & REMEDIATION FOR DATA VULNERABILITIES

Modern enterprises' digital landscape resembles a sprawling data maze, with data stores and applications in the cloud as towering skyscrapers and on-premises databases as the foundational structures. Amid this sprawling city of data, a complex maze of connections and relationships forms the backbone of operational efficiency. How do you make sense of this noisy maze of data problem?

The solution to this challenge lies in the ability to **discover**, **link**, and **group** sensitive data with high accuracy. Traditional approaches to data management lack capabilities to handle the scale and complexity of this new data paradigm. Organizations require innovative tools to solve the complex data problem identifying data relationships across clouds and on-premises repositories to ensure data security and privacy compliance.

Driving Business Value Through Self Learning AI

Manage Data Sprawls

- Auto Classify Sensitive Data Inventory
- Remediate Data OverSharing
- Categorize Data based on Purpose

Reduce Attack Surface

- Minimize Exposures Internal/External
- Remediation Guidance for Critical Risks
- Hotspots for Data

Save on Costs/Resources

- Lower Cyber Insurance Costs
- AI driven workflows
- Improve Incident Response Times
- Reduce Audit Times

Improve your Security Posture

Data Inventory and Classifications

Single pane of Glass for Cloud, On-Prem & SaaS Applications.

Data Minimization

Data deletion minimizes the risk of data breaches, supports regulatory compliance, and upholds the principles of privacy by design.

Data Detection and Response

Locate hidden, unmanaged data for better compliance, security, and operational efficiency at Petabyte scale.

Access Governance

Remediate Over Privileged Access.

Vulnerability Detection and Remediation

Automated detection and remediation of cloud infrastructure vulnerabilities.

Data Privacy

Automate Privacy Operations, Assessments & Data Requests.

About Secuvy

Secuvy vision is to empower data owners & stewards with visibility, classification, linkage for enterprise data. Businesses use our nextGen AI for simplified data governance and compliance.
